

Flow chart conventions.

Symbols :-

⇒

Steady state process.

⇒

Unsteady state process.

⇒

Continuous stream of materials.

⇒

Material transferred in a single instant.

⇒

Recycle stream.

Nomenclature :-

⇒

Process named A.

⇒

Stream named IA -

⇒

Streams named C4D.

⇒

Stream named A1

Tabulating data :-

Problem statement :- A stream with temperature T_1 , pressure P_1 and flow rate f_1 enters the process. Another stream with temperature T_2 , pressure P_2 and flow rate f_2 enters the same process.

The output stream from the above process has temperature T_3 , pressure P_3 . This enters the second process. Two streams come out of the second process. Both having the temperature T_4 & pressure P_4 and one having the flow rate f_4 .

Data :: Processes :- 2 \Rightarrow A & B (both steady state).
Streams :- 5 \Rightarrow 1A, 2A, A3B, B4, B5.

Table;

	1A	2A	A3B	B4	B5
Temp.	T_1	T_2	T_3	T_4	T_4
pressure	P_1	P_2	P_3	P_4	P_4
flow rate	f_1	f_2	?	f_4	?
